

ASSET MANAGEMENT

Effective Asset Management saves you money, reduces wasted time and helps your staff to be more productive from day one. It's also a vital component in the security of your business.

WHY DO I NEED IT?

Let's start with the most expensive asset you have – your people. When a new employee joins, he or she needs a number of key tools to do the job. A desktop computer. Perhaps a laptop, too. Access to the right software at the right time. A mobile phone.

Without a sophisticated Asset Management system, each of those items might be issued by a different manager or department, with all the paperwork and inevitable delays that entails. The new member of staff could be waiting for days before becoming a productive member of the team. All this time, you might as well be burning their salary.

With Cased Dimensions Asset Management, everything they need is waiting on the desk, primed and ready to go. The result is that they are contributing to the organisation from the day they first walk through the door.

Imagine, too, what a difference it makes to their first impression of your business.

Similarly, when one of your people leaves, retrieval and reassignment of assets is easily handled.

With the demands of digital transformation, Asset Management, handled wrongly, can be costly in terms of wasted money, time and incorrect procurement of assets. We provide you with comprehensive reporting (daily, weekly or monthly) to ensure that you are in control all the time. If you need to be compliant in ISO or secure government, your requirement for watertight Asset Management is even more crucial. Demonstrating that you are proactive in ensuring that particular data can be seen only by the right people and that privileges are strictly controlled is vital.

But that's just a snapshot of what Cased Dimensions Asset Management can do.

In addition to all the practical benefits, you'll enjoy a fast return on investment. Typically, it pays for itself within a year.

WHY CASED DIMENSIONS?

First and foremost, because we have a proven track record. Over the past six years we have worked with organisations large and small to transform their Asset Management. Our customers include a number of FTSE 100 companies for whom we've achieved that transformation globally.

That experience gives you the advantage of all the efficiencies we've learned along the way.

In short, we make it happen better and we make it happen faster. At Cased Dimensions, our people make us different. They have helped us become global experts in Microsoft products, developing software that realises potential even Microsoft didn't know was there.

As a result of our world-beating expertise, we are one of only three Microsoft Alliance Partners in the UK managed directly from Redmond, Washington.

We're ITIL aligned and CESG compliant and are audited annually.

We have a site in Dungannon, Northern Ireland, that's 16 times cheaper to run than an equivalent site in Belfast – and our customers benefit from those lower costs. We offer competitive rates for shipping and retrieval of assets, with same day or next day delivery across the UK.

Our satisfied Asset Management customers include:

- Grundfos, for whom we implemented a global solution.
- Secure government.
- Carillion companies.
- Career Builder.

We offer a personal touch that's often absent in some of our bigger competitors. To put it a different way, we're big enough to deliver but small enough to care. Why not come and talk to us?

MORE DETAIL ON WHAT WE OFFER

The business of Asset Management has become even more complex with the advent of digital transformation.

It can be a huge undertaking in terms of cost and time, adding to the burden on Human Resources and eating up scarce executive time.

When you ask us to provide our solution we start with a comprehensive look at where you are now. In other words, we like to understand your company – and your company's needs – inside-out.

Other Asset Management solutions place a heavy load on the IT department to input and configure information about assets that the company holds. This is costly, time-consuming and can cause delays. We're different. Our in-house developed software uses existing data to automate the process. We're so convinced of its effectiveness that we use it ourselves.

Once it goes live, our Asset Management system can track every asset throughout its life cycle and report against cost by department, geographical location or cost code.

Our end-to-end lifecycle service is exactly that. It uses the industry best practice ITIL framework while allowing us to focus on the individual needs of each client.

Standard features of our Asset Management service include:

- Hardware requests
- Software provision, tailored to each user
- Procurement
- Maintenance and repair
- End of use reporting
- Retirement or disposal of assets, including Blancco secure erasure of data and ensuring that environmental regulations are adhered to.

We have implemented Asset Lifecycle Managed Service solutions for major organisations across various business sectors. Our experience includes providing a complete IT asset management service for a major Secure Government enterprise consisting of over 6,000 desktop/laptop devices and for a FTSE 100 client with over 20,000 employees.

Because we are so experienced in working with enterprises of different sizes, everything we do is flexible and can be scaled up as your requirements develop.

We are a trusted Microsoft Alliance Partner, and the company will often consult us when developing the best possible service to customers.

About Cased Dimensions
