

# Asset Management

## WHY CASED DIMENSIONS' ASSET MANAGEMENT IS RIGHT FOR YOU

At Cased Dimensions, we exceed industry standards for IT Asset Management.

Our secure and manned 10,000 sq ft Lifecycle Centre currently provides UK central Government and commercial customers with a world class Managed Service for their vast array of IT assets.

We work with you to understand employee, supplier and customer profiles for which assets they are allowed access to and the approval processes required. Our Asset Management service is configured within an ITIL 3 compliant Service Desk.

The benefits of our IT Asset Management include:

- Cost savings
- Less wasted staff time
- Instant overview of assets
- Comprehensive reporting
- Better management of software licences
- Government-standard compliance
- Scalability
- World-beating expertise
- Fast return on investment (typically within a year)

Other Asset and Inventory Management solutions place an extra burden on the IT department to input and configure asset information. Our software, developed in-house, uses existing data to automate the process and provide a more accurate picture.

We track all your assets from implementation to disposal, reporting against cost by department, geographical location or cost code. Our Lifecycle Centre offers same or next day delivery and retrieval of hardware across the UK at competitive rates. When hardware is disposed of, we employ Blancco secure data erasure.

When it comes to software, we reconcile usage with contracts, often enabling clients to reduce costs on surplus licences. We also reduce your exposure to vendor audits.

With Cased Dimensions, you get the compliance you need right from the start. We're ITIL aligned and C ESG compliant, trusted by secure Government clients.

We're also experienced in working with organisations of different sizes. Everything we do is flexible and can be scaled up to suit your requirements.

Our world-beating service is matched by our world-beating costs. Our site in Dungannon, Northern Ireland, is 16 times cheaper to run than an equivalent site in Belfast, benefiting our customers. And because we're so experienced in Asset Management, we can pass on efficiencies that we have acquired along the way.

## CUSTOMER SNAPSHOT: GRUNDFOS

Grundfos is a world leader in pump and water technology, operating in 80 locations around the globe and employing nearly 20,000 staff.

It needed to manage its global assets, including PCs, laptops, phones and software, more efficiently. Its Systems Consultant, Niels Moller, describes Cased Dimensions' Asset Management as "an eye-opener," making the company more aware of precisely how many asset locations it had.

The result was improved efficiency, cost savings and greater security.

Your guarantee that we'll deliver on our promises is the strict Service Level Agreements (SLAs) that we attach to every project, setting out what you can expect and when. In the area of Asset Management, the SLA will cover everything from procurement to recycling and all stages in between.
